Test Plan
Target app: saucedemo.com

Scope

1. Login.
2. Product Search.
3. Checkout functionalities.

Objectives

1. Verify that users can successfully log in.
2. Verify that product can be added to a cart.
3. Identify the bugs that may affect the user experience.

In Scope

1. Login/Logout.
2. Product Search.
3. Add to cart.
4. Checkout flow and order confirmation.

Out of Scope

1. Payment gateway security.
2. Performance and load testing.
3. Accessibility standards compliance.
4. Cross-browser and cross-device compatibility testing.
5. Usability testing.

Test Environment

1. Device: Laptop/PC
2. OS: Windows 11
3. Browser: Google Chrome, Microsoft Edge
4. Internet: Stable Internet Connection
5. Test environment: Staging Environment
6. Tools: Postman/SQL will be used in a separate API/data validation exercise

Entry Criteria

1. Requirements are approved.
2. Build is deployed to the staging environment.
3. Test data is available.
4. Test environment is accessible.

Exit Criteria

1. All planned test cases have been executed.
2. No critical or High severity bugs remain open.
3. 95% of the test cases have passed.
4. Test results have been documented.

Risks

1. Staging environment may be unavailable.
2. Requirements may change during testing.
3. Limited testing time.
4. Third-party payment service may be unavailable.

Test Approach

Testing will be performed manually using black-box and functional testing techniques. Testing will be conducted directly through the user interface (UI) using web browsers, primarily Google Chrome and Microsoft Edge.

The following techniques will be used: **Positive testing, Negative testing, Boundary/Edge Case testing, and Exploratory testing.**

Basic UI checks: The application interface will be checked for obvious visual and layout defects that may affect navigation, readability, or interaction with functional elements.

Testing will be performed manually using predefined test cases, with results recorded as **Pass/Fail**.
