### Description

**Steps to reproduce:**

1. Log in with valid credentials: problem_user / secret_sauce
2. Navigate to the **Products** page
3. Click any product name or product image
4. Observe the product details page
5. Compare the selected product with the product displayed on the details page
6. Repeat with other products

**Expected Result:**
Clicking a product should open the details page for the **same product**, with the correct product name, price, image, and description

**Actual Result:**
Clicking a product redirects to a product details page containing a **different product**, with a different name and price. The issue occurs with all products tested.

When opening the product image/name link in a new tab using '**Open link in new tab**' the new tab opens the Products page instead of the selected product's details page

**Environment:**
Windows 11, Google Chrome

**Priority:** High
**Severity:** Critical
